Juvenile Song Sparrow Survival
With Kristen Dybala, former PRBO Biologist and current UC Davis Grad Student

Song Sparrows are an important bird species in many of PRBO’s research projects. They respond quickly to changes in the environment and there are important endemic subspecies found around the SF Bay. Although Song Sparrows are fairly well-studied, not much is known about survival of young birds. Kristen is focusing on this question with her current graduate work at UC Davis while collaborating with PRBO and is filling in some gaps in Song Sparrow life history. Come get filled in on your knowledge of this key bird species!

Thursday May 21, 2009
6:30pm– 8pm

PRBO’s SF Bay Research Center • 3820 Cypress Drive, #11 • Petaluma, CA

$5 suggested donation
as an honorarium for the speaker
